IBARR™
WINDOWS & DOORS
BUILT FOR GENERATIONS

FOR GENERATIONS

For over 70 years the Harry G. Barr Company has provided the highest quality building materials available. A product is only as good as the quality of the company that stands behind it. Since 1934 the Harry G. Barr Company has proudly stood behind every product it has produced. Opened as a family business, the high ideals and strong business ethics that helped grow the company continue today through the third generation of family ownership and management.

WeatherBarr windows are the best choice, either for your new home, or to replace the leaky, worn out windows in your existing home. They're built to make your home more comfortable, more beautiful, and provide substantial energy savings not just now, but for many years to come. All WeatherBarr windows come with a limited lifetime warranty. Not many lifetime warranties are backed up by a company that's actually been around a lifetime.

EASY CLEANING

Double hung top and bottom sashes tilt in for safe and easy cleaning from within the home, while the unique brake system keeps the sash in place. Single hung bottom sashes tilt in. Slider panels lift out from inside the home, making cleaning safe and easy. Our optional window grids are sealed between the glass so they will never collect dust.

- Both top and bottom sash tilt in for easy cleaning.
- Unique brake system locks sash firmly in place.
- Cleaning your windows is as easy as wiping off your kitchen table.

SOLID COLOR

WeatherBarr Windows expands the typical base color palette to include **beige, white, and clay**. These base colors permeate the vinyl for a scratch and wear resistant finish. Beige and white can also be coated with ColorGARD Exterior Surface Coating (ESC) Standard or Premium colors for a stunning exterior look.

BEIGE

WHITE

CLAY

Your home deserves more than a cookie cutter window package. There are a lot of windows you can invest your dollars in, but there are few that compare to our Heritage family of products.

While its narrow sight lines open your home to maximum daylight, the Heritage also has sharp, crisp contours to provide rich detail to your home's exterior. The Heritage achieves superior structural results and impressive energy performance, and is equipped to outperform other windows in its class. Plus, you can add your own designer touches to your windows with our many different divided lite and decorative glass options.

Heritage series windows allow you to create an endless array of design possibilities with its vast selection of styles, sizes and shapes. As with our entire product line, you can make your Heritage windows your own by selecting the Smart Glass option that fits your home. Combine our ColorGard ESC finish and our distinctive grid selections to bring your own style to your windows. Give your openings some flair with operable architectural shapes. With this series, you can create any number of architectural shapes, from circle tops and eyebrows to trapezoids and triangles; it will fill your needs.

BUILT STRONG

With Heritage there's no need to sacrifice aesthetics for performance. Our windows are designed to enhance the look of your home and keep it safe from the elements.

1. The 3 1/4" multi-chambered frame provides superior strength, rigidity and durability. The added depth allows the face of the frame to be narrower, which lets more natural light into your home.
2. Every corner of a Heritage window is precision fusion welded; no screws or silicone.
3. The 11.5 degree slope of the high performance true-sloped sill naturally sheds water to the outside, while the auxiliary water evacuation route provides extra protection during the harshest weather conditions.
4. The vertical sill interlock and the high performance compression seal with barrier flap provide structural strength and protection against air and water infiltration.

HERITAGE

TRIBEAM

The Tri-Beam composite, low conductive, structural reinforcement system outperforms metal reinforcement products in three ways. Tri-Beam insulates 730 times better than aluminum and 191 times better than steel. It is made of a composite material that is recyclable and sustainable, and it is exceptionally strong without the thermal and deteriorating drawbacks of metals.

VANGUARDLOCK

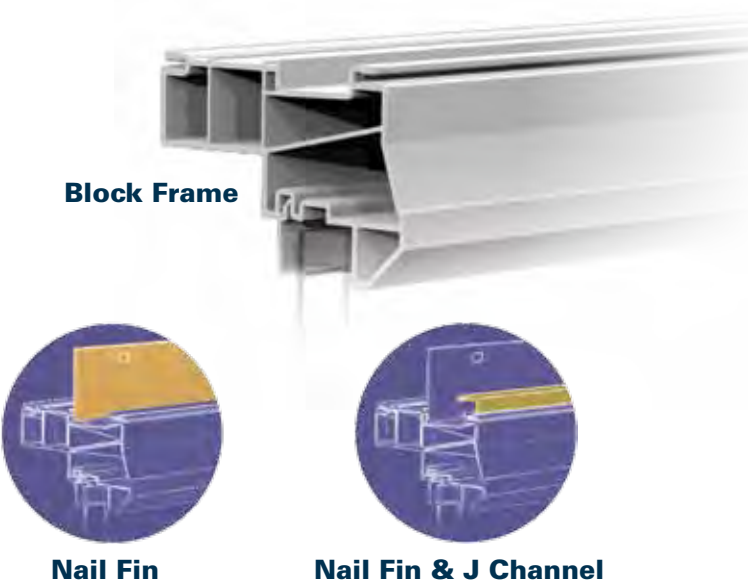

The Vanguard advanced composite cam lock is designed to provide maximum protection from forced entry. These American-made locks contain no zinc or lead and outperform metal locks in strength as well as impact and corrosion resistance. The sloped cam pulls the sashes together and forces the window sash downward, sealing the window tighter as it locks.

Durable, Composite Construction

FRAMEOPTIONS

The Heritage series window is versatile in almost any application. The window frame can be ordered as a block frame (ideal for window replacement applications), with an integral nail fin or with an integral nail fin and J channel for new construction and siding applications. Whatever your needs, this series of products can more than fit the bill.

DURAFORCE

DuraForce is a balance system made up of tempered, stainless steel, self-adjusting, coil springs that effortlessly support the sash. This system is maintenance free and ensures extremely smooth, quiet operation for a lifetime.

DuraForce Balance with Self-Adjusting Coil Spring

SMARTGLASS

Since over 80% of your window is glass, it makes sense to select the highest performing glass that will provide you the best value in your home. Not all Low-E glass performs equally. You need glass that is smart enough to block what you don't want and allow what you do want into your home. Our spectrally selective soft coat Low-E glass options provide maximum protection to your home in winter and summer.

Smart Low-E

Our **Energy Smart** (ES) Low-E uses 2 microscopic layers of silver to keep the heat where you want it. ES Low-E glass reduces heat gain by 50% compared to ordinary glass, and blocks 86% of harmful UV rays.

Our **Solar Smart** (SS) Low-E uses 3 microscopic layers of silver to maximize the energy efficiency of your window. SS Low-E glass reduces heat gain by 64% compared to ordinary glass and blocks 95% of harmful UV rays.

Argon Gas

Argon is a non-toxic, odorless, inert gas that is heavier than air. It provides superior insulation value when used inside an insulated glass unit. All windows with Smart Glass come standard with Argon fill.

Smart Spacer Systems

Our warm edge **Intercept** spacer system creates a thermal barrier between the inside and outside pane. The steel U-channel design is wrapped in butyl, preventing glass to metal contact, thus reducing the possibility of temperature transfer from one pane to the other.

Our structural foam **SuperSpacer** creates the best thermal barrier between glass panes. Because the material is non-metal, it virtually stops the transfer of temperature from outside pane to inside pane. This closed-cell polymer foam spacer provides improved condensation resistance and reduces sound transfer from outside noise.

Interior **DOUBLEHUNG**

1. Dedicated head extrusion is specifically designed to eliminate snap-in accessory adaptors and allows for superior strength and insulation.
2. Balance covers give the interior of the window a finished look. The concealed draft block system virtually eliminates air infiltration through the balance cavity.
3. Vent Loks provide peace of mind ventilation.
4. Low profile "EasyTouch" tilt latches offer easy operation and cleaning.
5. Dual wall construction increases strength, rigidity and insulation where the glass meets the frame.
6. The integral ergonomic lift rail located at the glass line allows fingertip control with safe and easy operation.

Exterior **SINGLEHUNG**

1. 3 1/4" Heavy duty multi-chambered frame depth provides strength, insulation, and durability.
2. Defined beveled exterior gives the Heritage series crisp, clean sight lines and an enhanced appearance.
3. Tri-Beam composite, low conductive, structural reinforcement system provides superior strength and performance ratings.
4. Full interlocking meeting rail with full length fin-seal weather strip, in conjunction with the locking system, ensures maximum security against forced entry and the outside elements.
5. Attractive heavy-wall rectangular glazing beads with co-extruded durometer seal provide a tight seal against the glass.

MOREBENEFITS

- Precision fusion welding ensures that the sash and frame joints are completely sealed and perfectly square.
- Virgin uPVC construction is virtually maintenance free and provides exceptional insulation value.
- 3/4" insulated glass with warm edge technology upgradable to 7/8" triple glaze insulated glass for maximum insulation value.
- Heritage windows have narrow frame and sash profiles to maximize your viewing area.

FORLIFE

Every WeatherBarr window is backed by a Lifetime Warranty, for your peace of mind. Ask your dealer for more details.

WeatherBarr windows ordered with Smart Glass options are ENERGY STAR qualified in many areas of the country. For a complete listing of NFRC ratings for all WeatherBarr windows go to www.weatherbarr.com.
